

```
1 @app.route('/hello/')
2 def hello():
3     return 'hello world!'
```

app.route装饰器后字符串加/, 表示兼容<http://127.0.0.1:5000/hello/>和<http://127.0.0.1:5000/hello>两种方式

flask处理兼容:

路由注册的两种方式:

```
1 @app.route('/hello/')
```

```
1 def hello():
2     return 'hello world!'
3 app.add_url_rule('/hello', view_func=hello)
```
